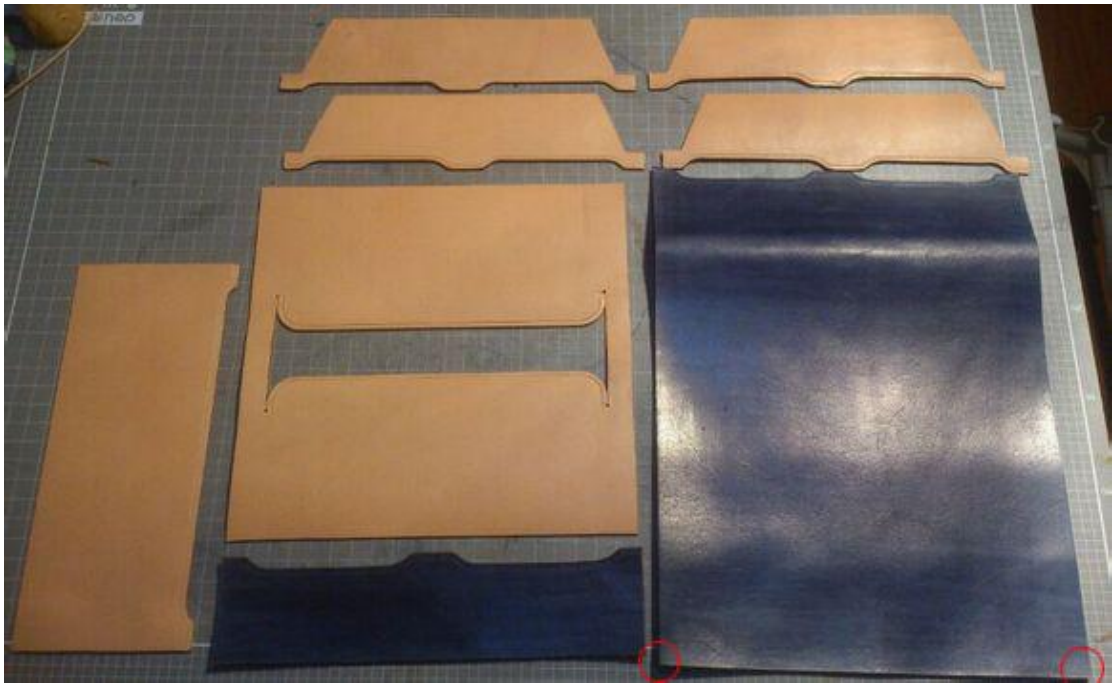
Step 1:

Cut all the parts according to the pattern, and color the leather as your wish, I did as blue. (Please notice the two circles in the picture, when I make this wallet, I didn't design the corner as round corner, but during the working process I found round corner is more charming, so I cut two round corners later.)

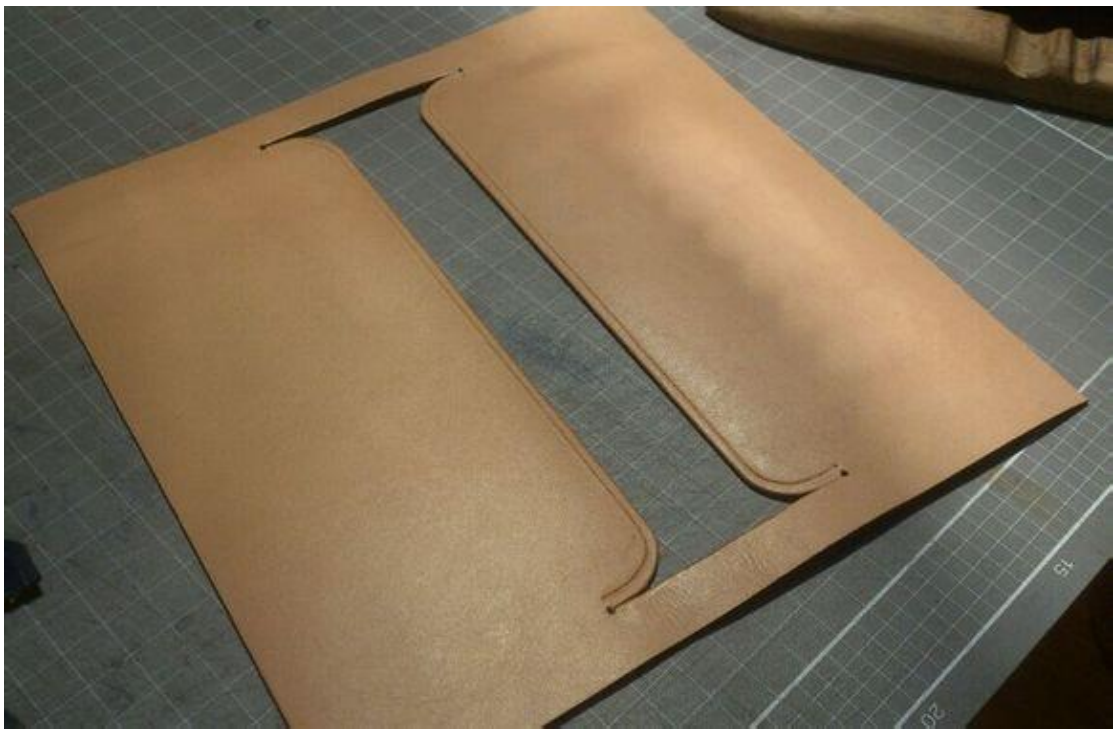


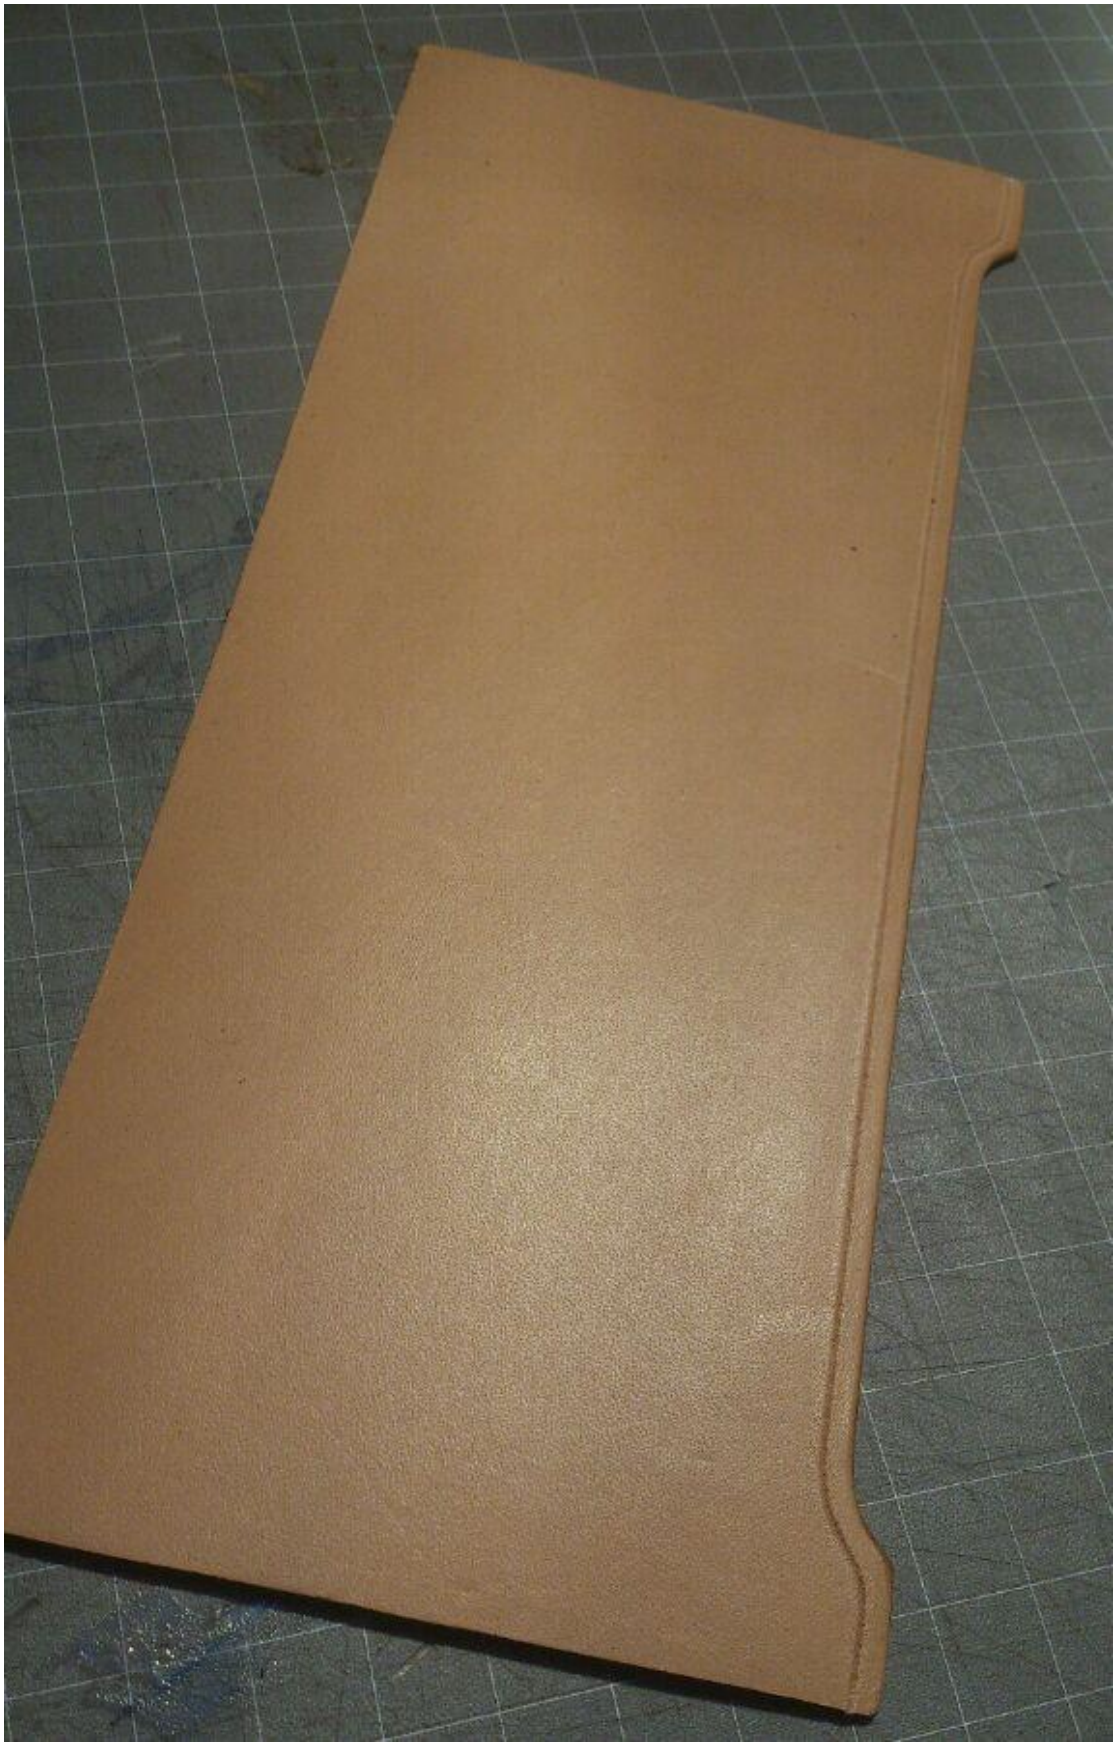
Step 2:

Paint tragacanth gum on flesh side, and polish with flesh side wood block, you can buy this tool from our website:

http://www.leathercraftpattern.com/leather-tools-leathercraft-tools/Wood-slicker

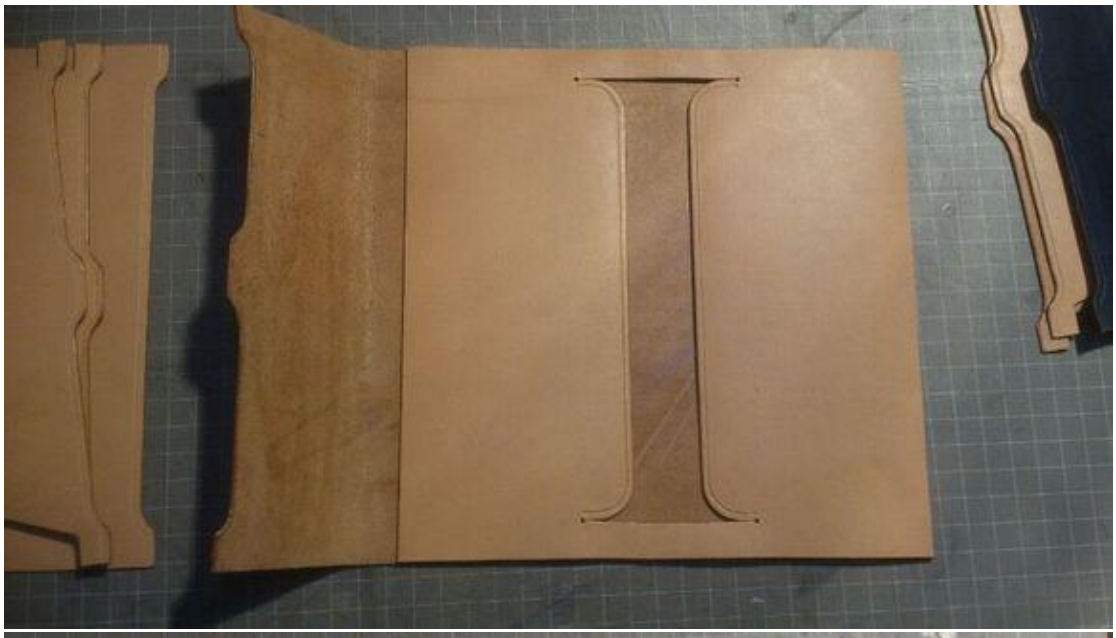
Step 3:
Polish the edge and make decoration lines with pressor.

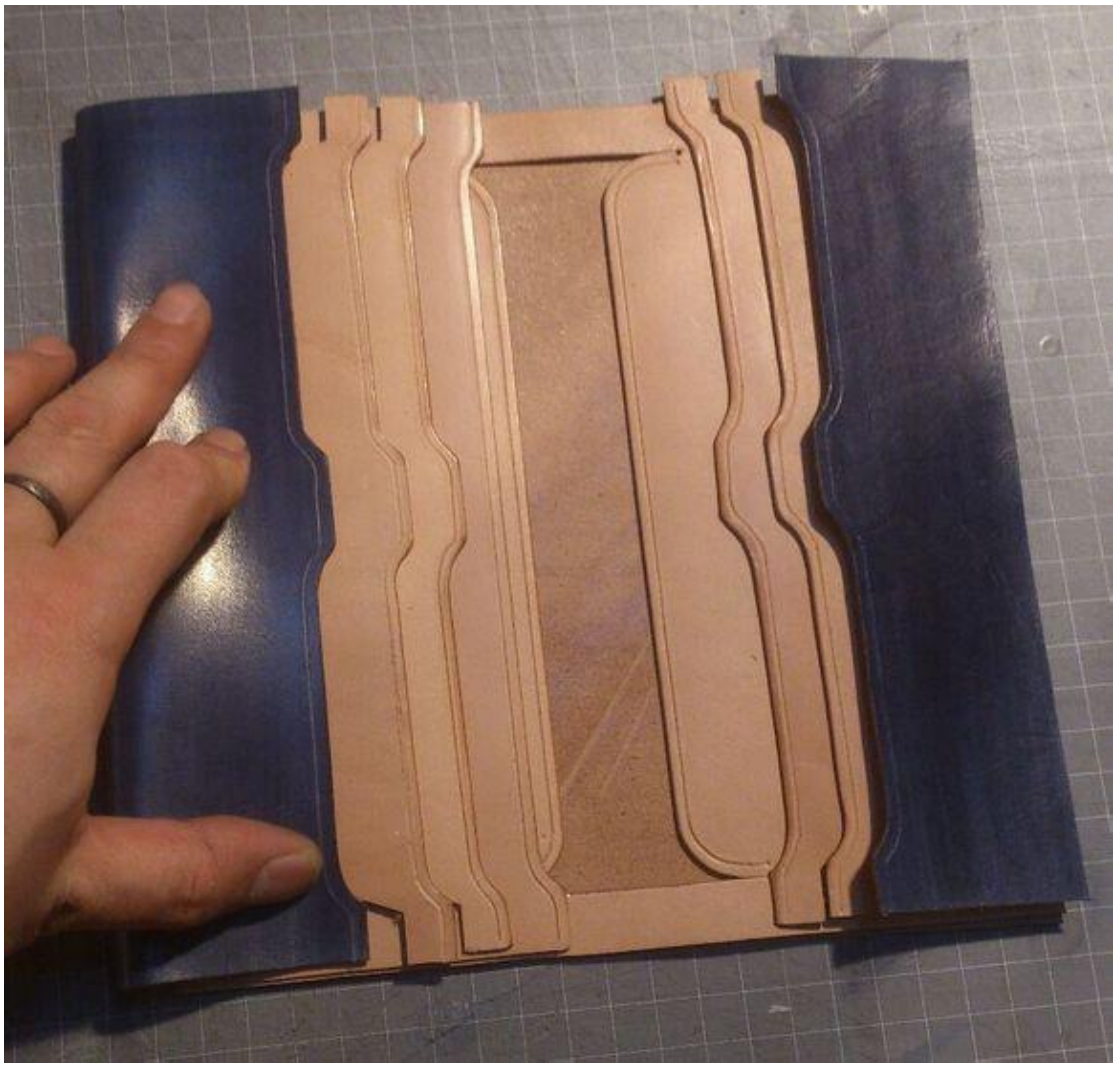




Step 4:

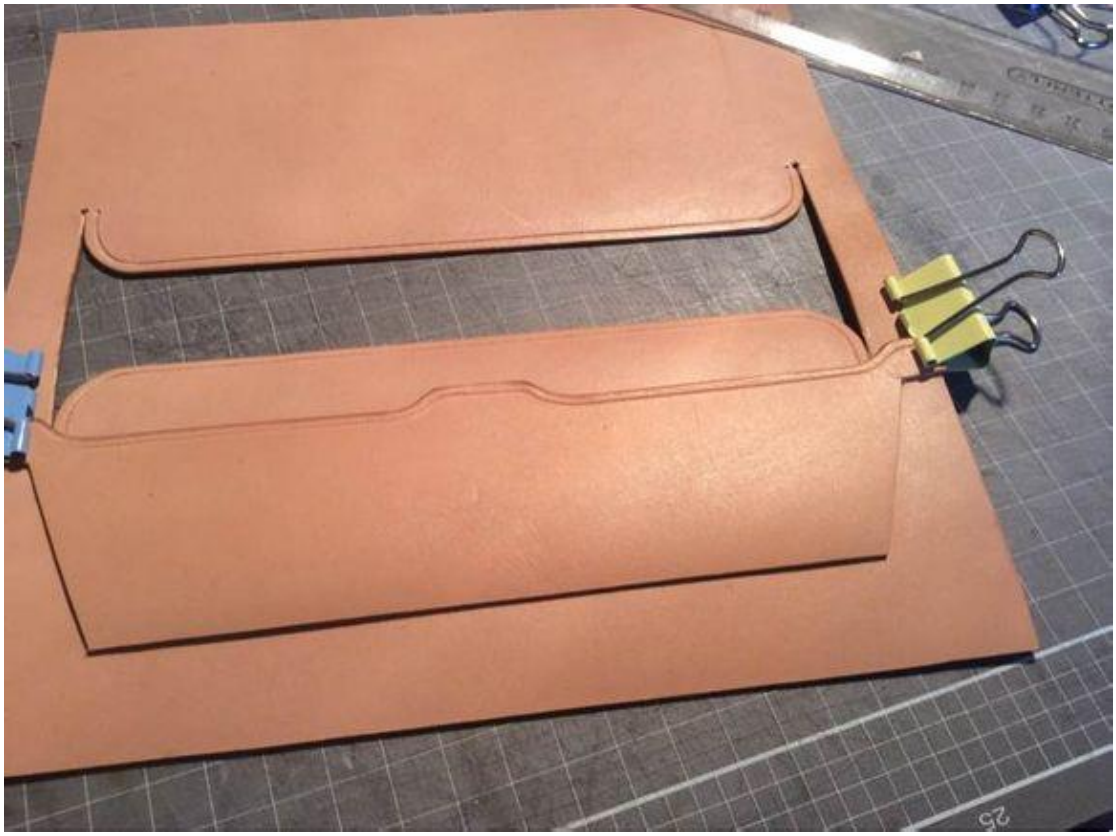
Let's put all pieces on the right position to take a look.

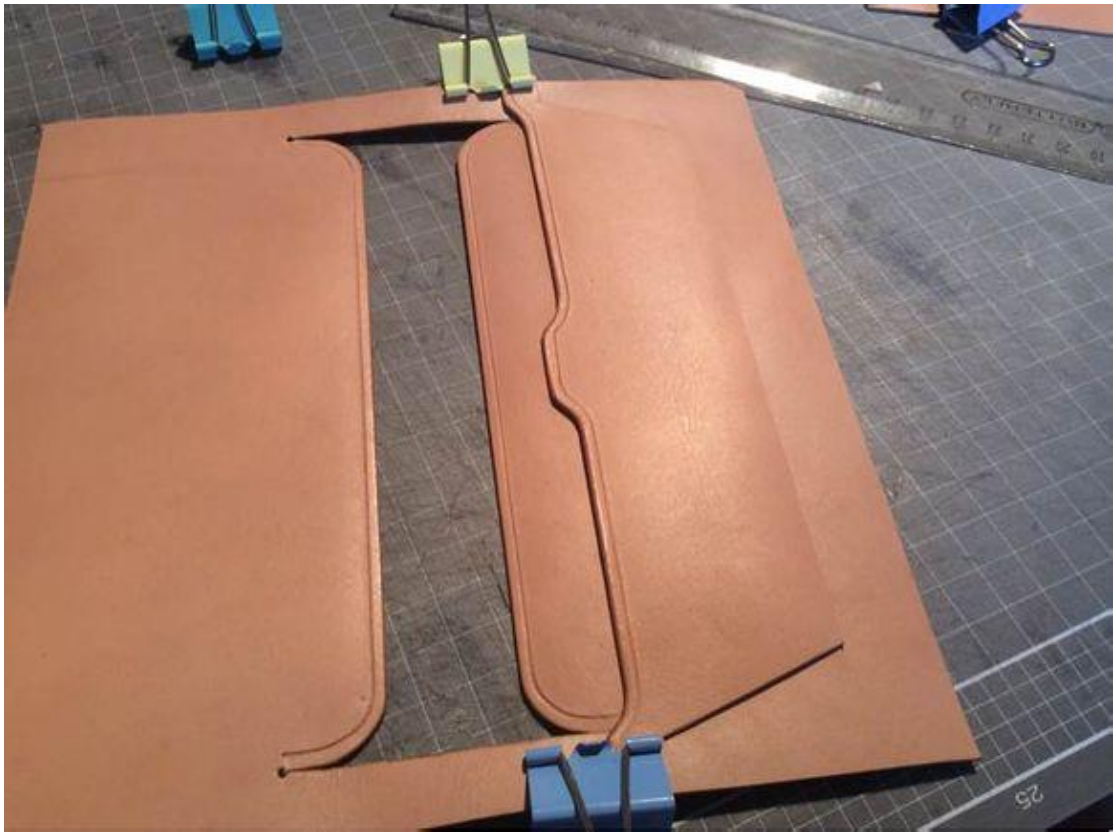




Step 5:

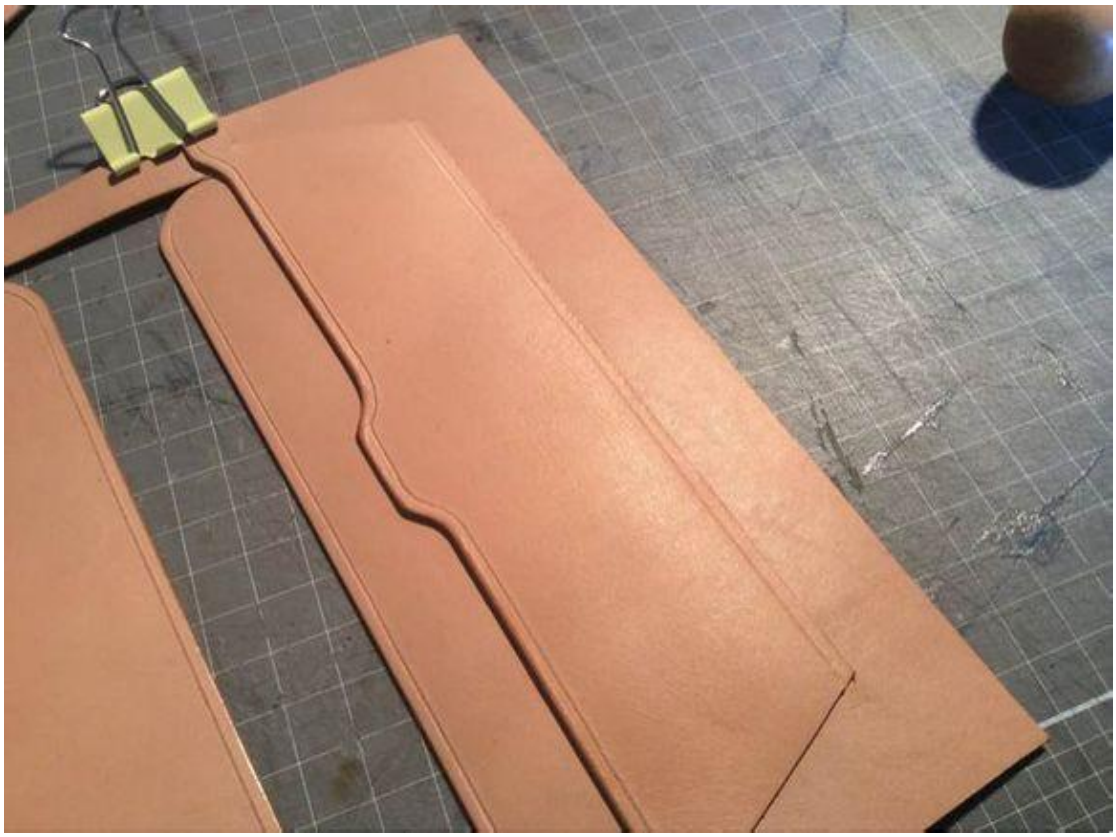
Glue one Internal card slot on Lining and use clips to fix it.





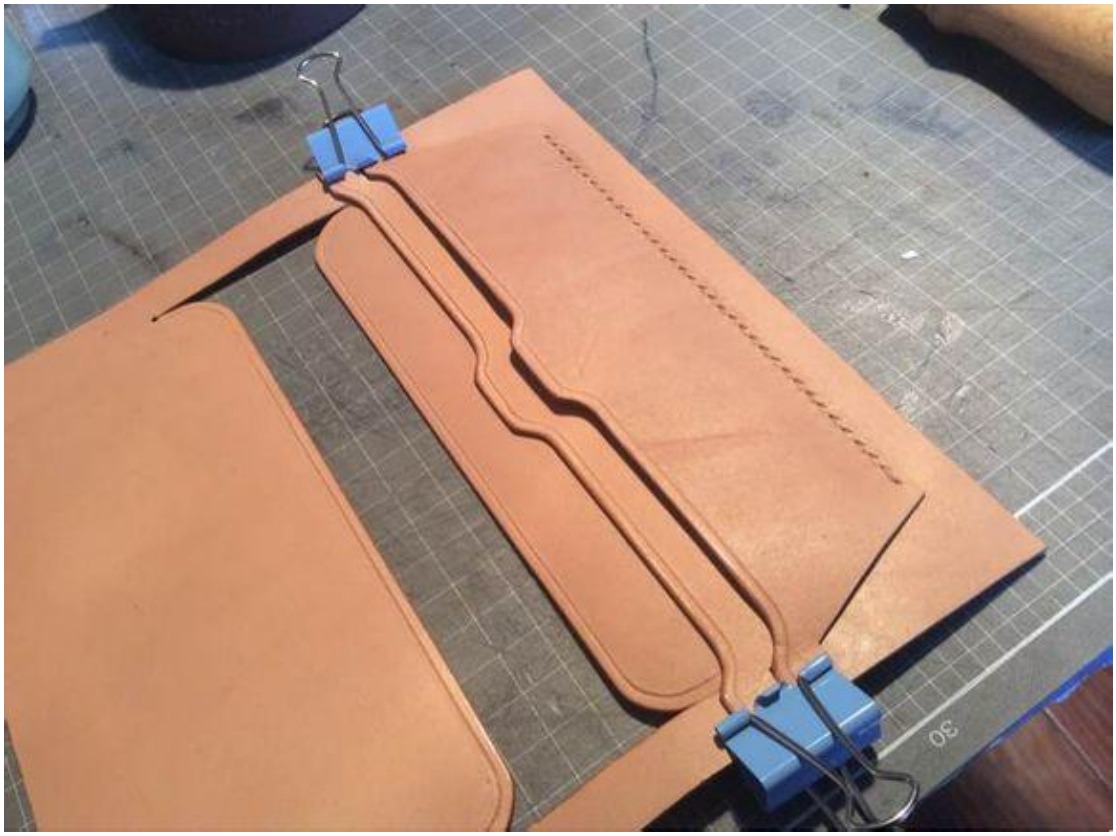
Step 6:

Then we prepare to sew this card slot on lining, draw a line with compass. And punch holes with your chisel. Sew them together.



Step 7:

Do the same as the first piece.



S

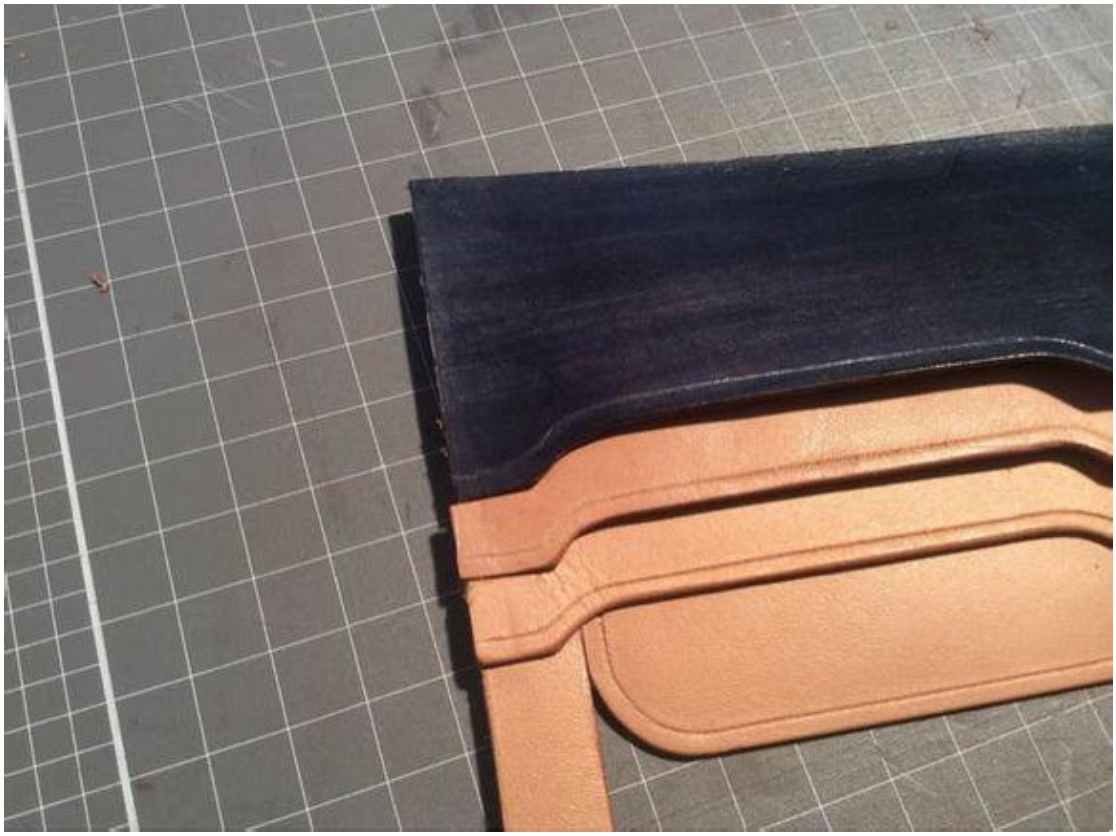
Step 8:

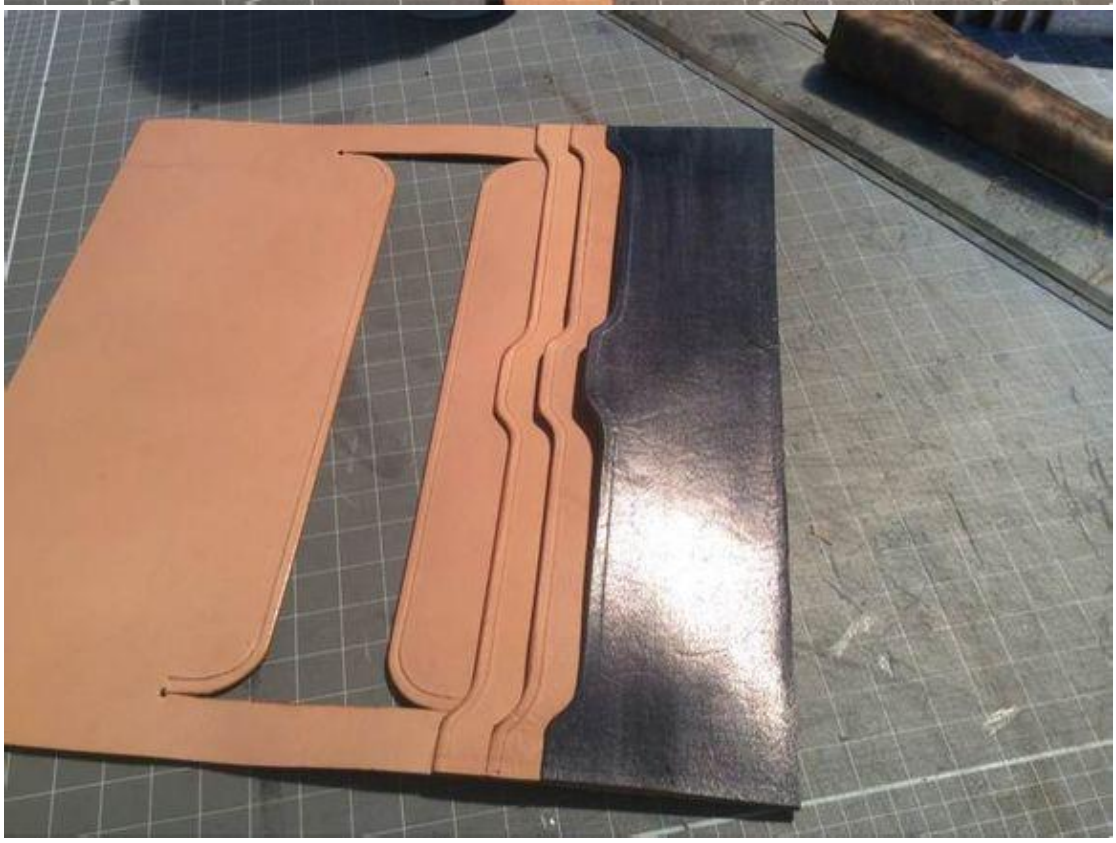
Now a very important step, skive the edge, I use a very easy way to show to new player, use the sand paper to grind to thin.....

Step 9:
Paint white glue and put the external card slot on.

Step 10:

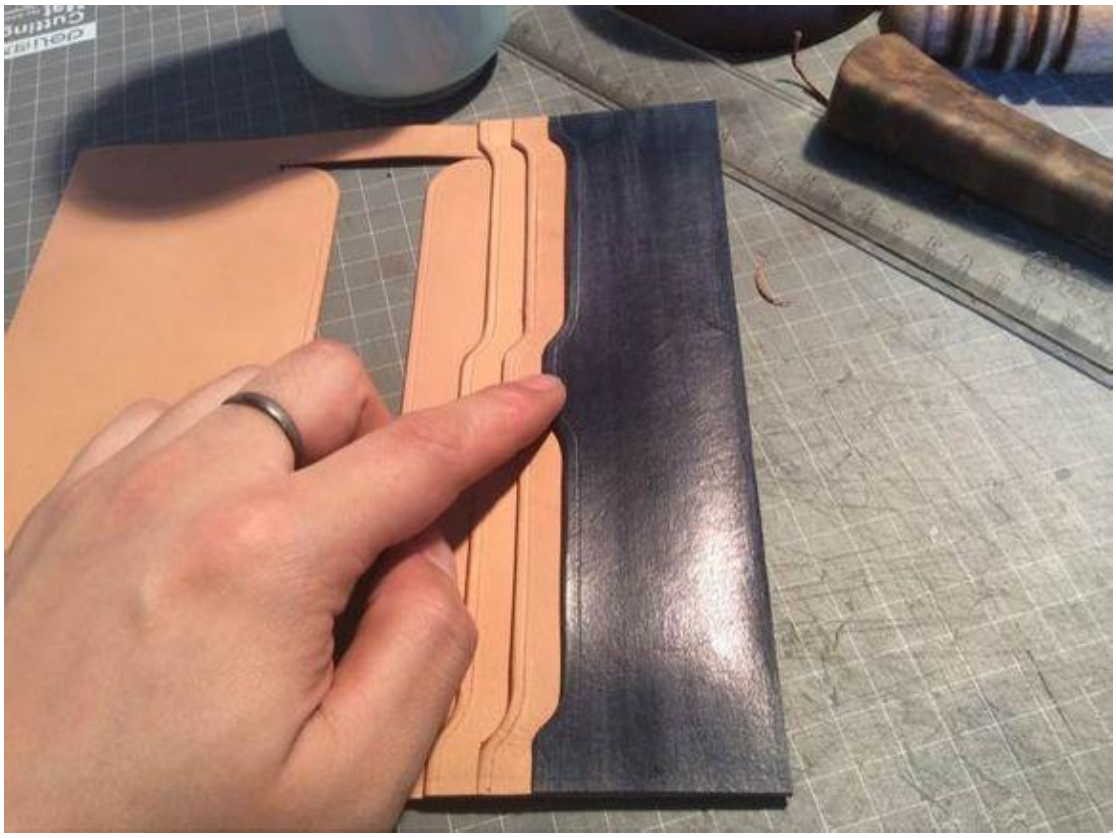
After 10 mins, the glue is dry, then take all clips away. We found the card slot is a little disformed. So let's cut neatly.





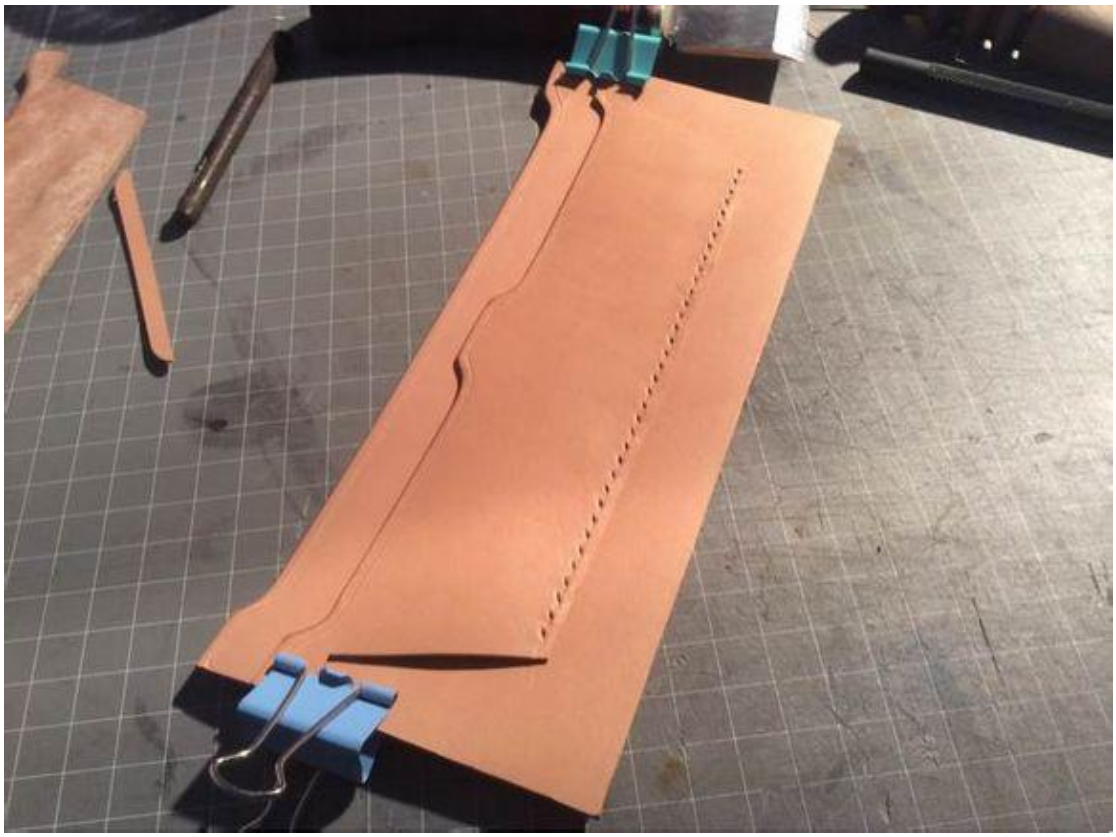
Step 11:

Prepare to sew the middle line.



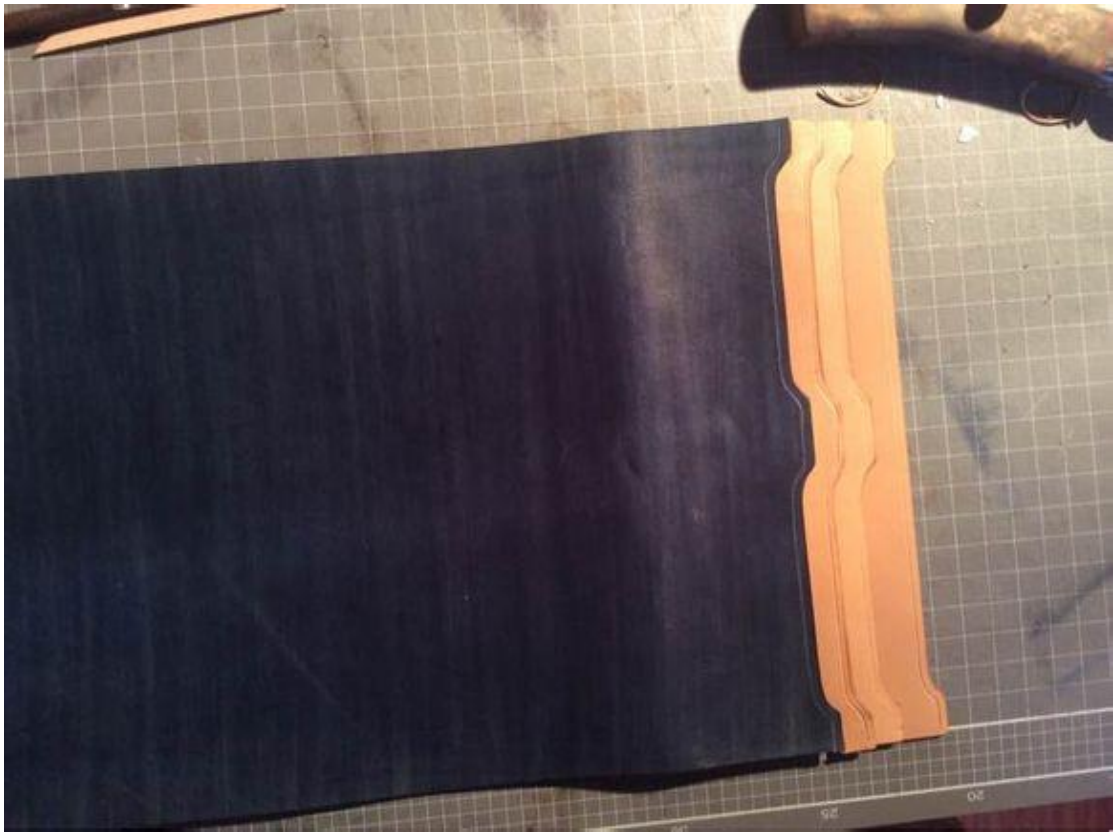
Step 12:

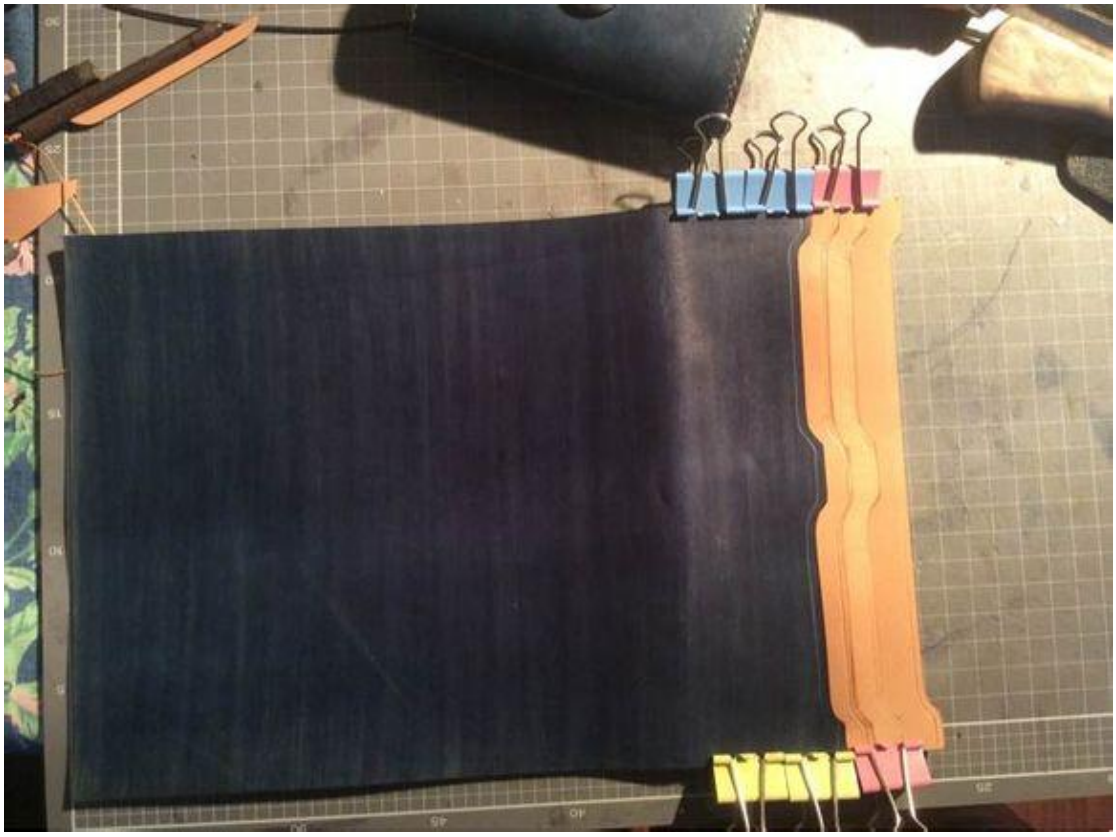
Almost the same step, put a piece of internal card slot on card slot back leather and sew them together. Then the second.

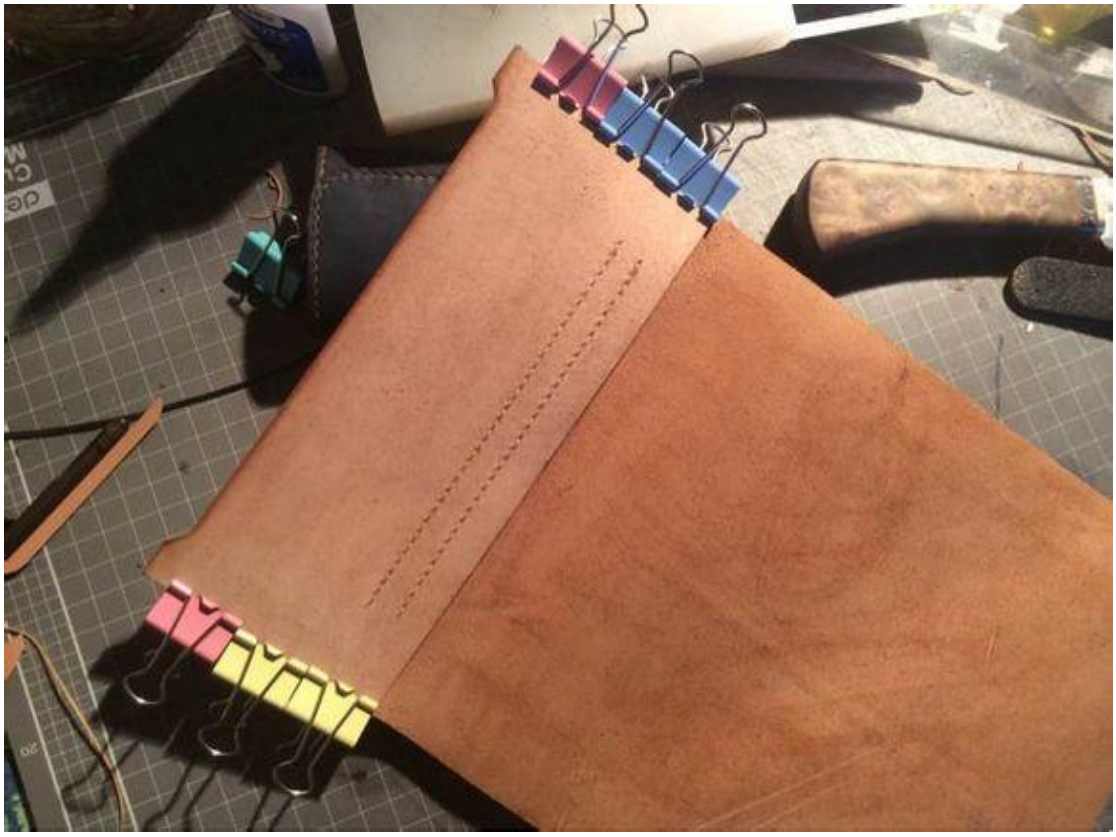


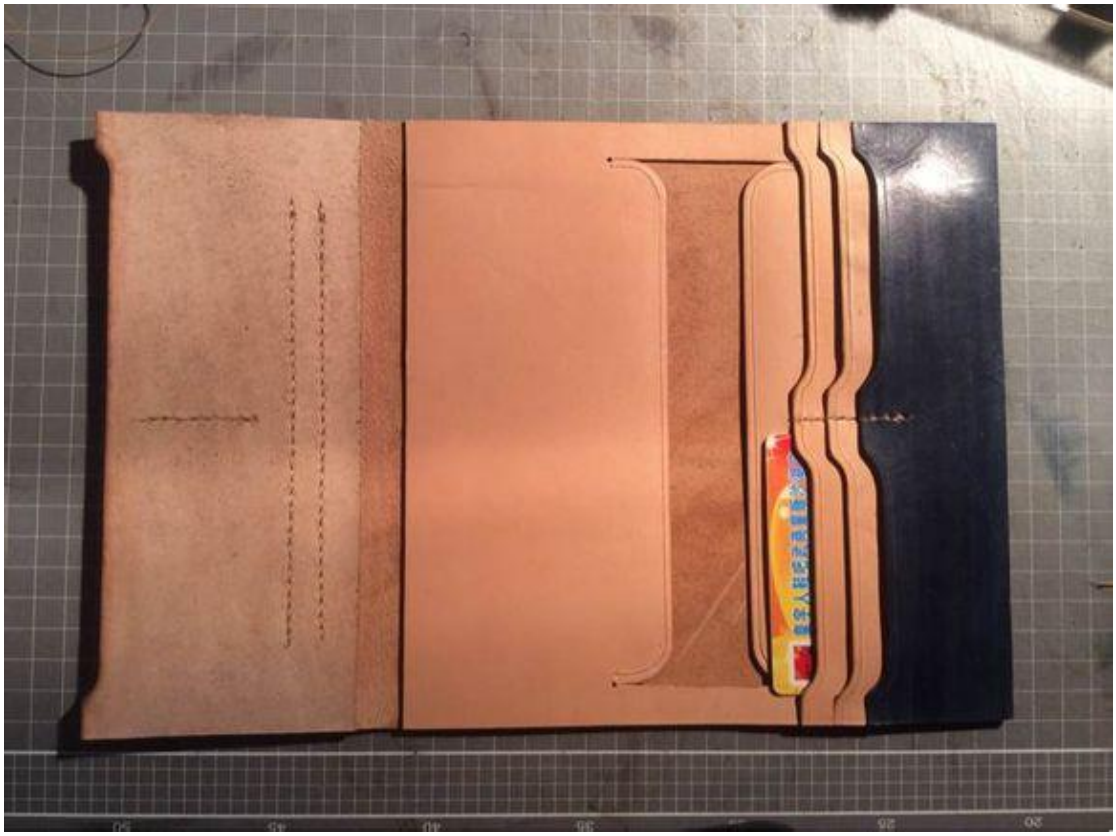
Step 13:

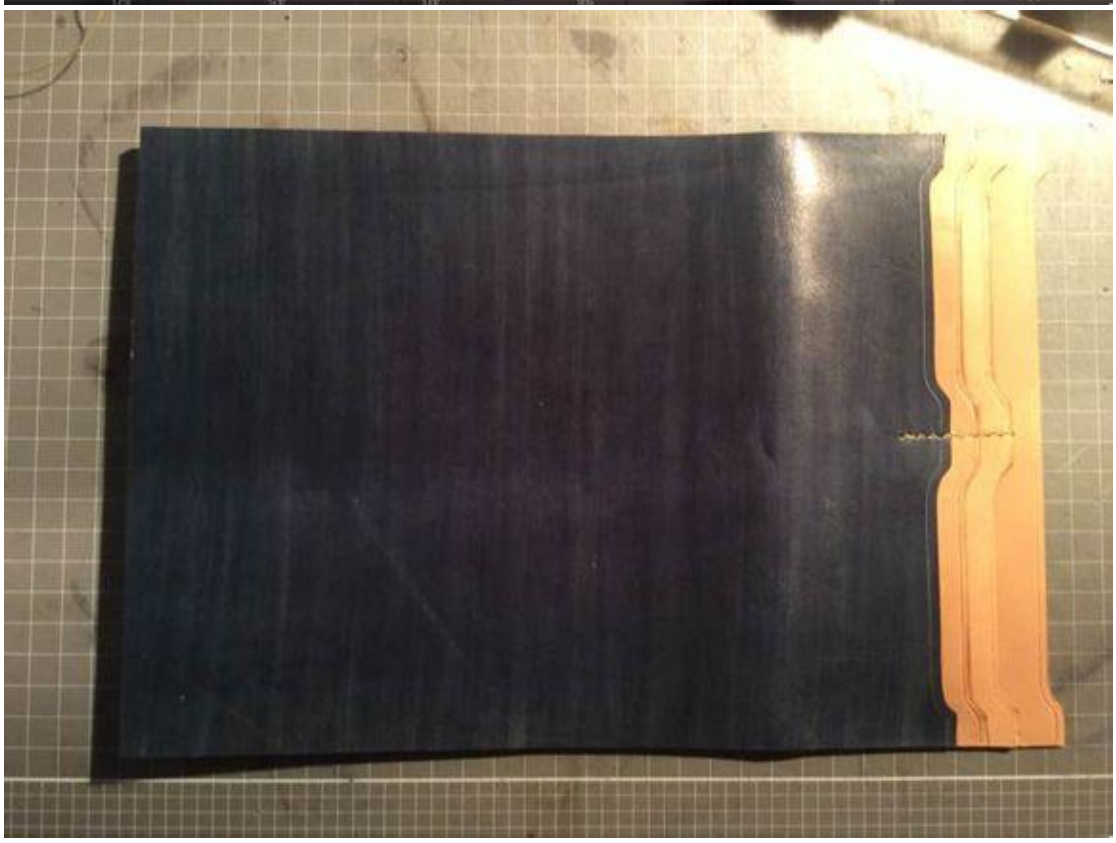
Prepare to combine them together. Glue them and sew the middle thread.

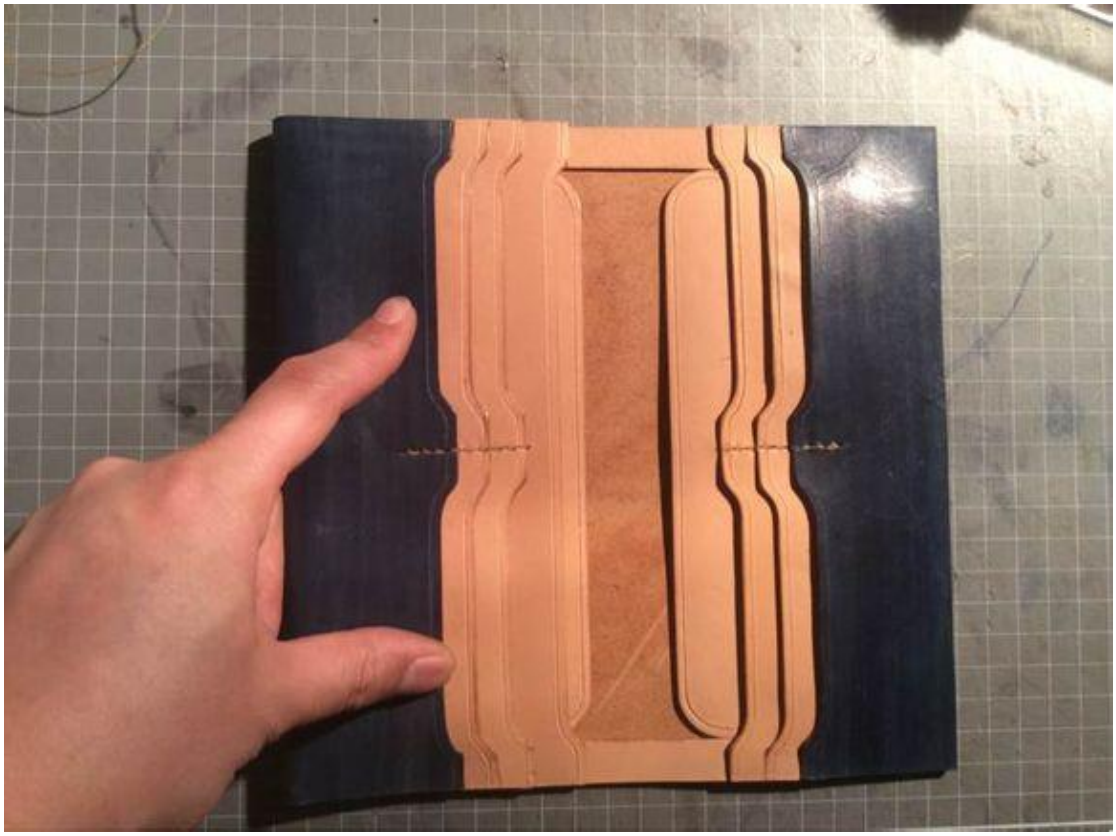












Step 14:
Glue the two gussets on. And sew one side first.

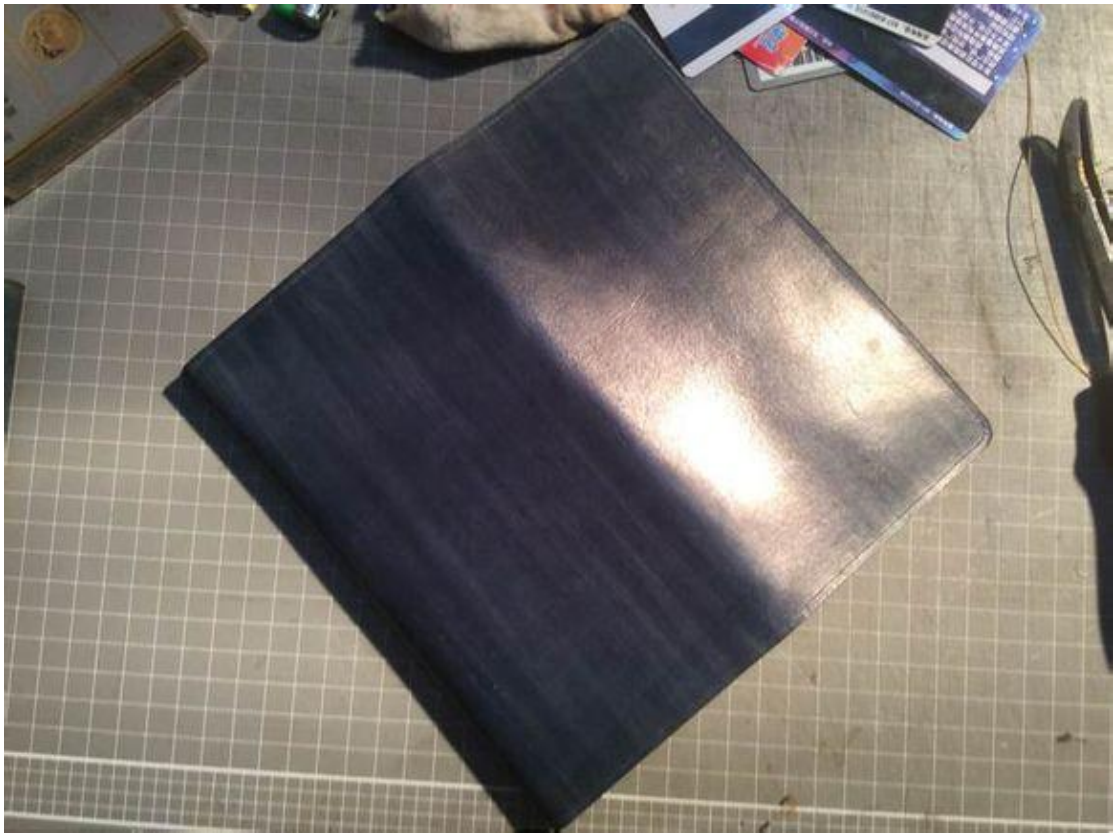
Step 15:

Then glue the other sides together. (Actually, I suddenly found round corners are beautiful so I cut two round corners in this step)

Step 16:


OK. Let's sew the last longest thread to finish this work. Draw lines with your compass, and sew, finish.
